

DATAGOV TOOLS V2 · SAMPLE TEST PROJECT · FILLING GUIDE

Fleet Delivery Performance

Expected Project ID PRJ-2026-025 · PT Logistik Cepat Nusantara (Dummy) · all names, IDs and numbers are fictitious

Sample project for a logistics company that shares delivery history with a route-optimisation vendor. It tests a project with little personal data (only driver codes, postcodes and depot e-mails), the Monetized Commercial Asset option, a DSR with AI use and its AICK, a DPIA with Low residual risk, and Data Quality with stale data, swapped coordinates and gaps that are expected by design.

Files (folder `Dummy Data Source/PRJ-2026-025/`)

File (sheet)	Rows x columns	Used for
FLT01_Vehicles.xlsx (vehicles)	80 x 7	Metadata, DQ
FLT02_Deliveries.xlsx (deliveries)	1,200 x 12	Metadata, DQ, DSR 1 (AI use)
FLT03_Depots.xlsx (depots)	12 x 6	Metadata (reference table), DQ

Field names and buttons follow the current version of the application. The Project ID is assigned by the system (the next free PRJ-2026-NNN); PRJ-2026-025 assumes the three sample projects are created in order after PRJ-2026-022.

Step 1: Create the project (Data Assets Catalog > New Data Asset)

Project ID / Code	assigned by the system (expected PRJ-2026-025)
Project / Asset Name	Fleet Delivery Performance
Customer / Client Name	PT Logistik Cepat Nusantara (Dummy)
Line of Business	Logistics & Supply Chain
Project Category	Integration
Project Year	2026
Monetization Status	Monetized Commercial Asset
Start Date	2026-06-01
End Date	2026-12-31
Use Case & Governance Description	Integrate vehicle, delivery and depot data into one performance dataset and share it with a route-optimisation vendor to cut late deliveries and fuel use. The optimised routes are sold to partner couriers as a paid service. Personal data is limited to pseudonymous driver codes, customer postcodes and depot manager e-mails.

Delivery & Governance Team (pick the existing users)

Role	User
Subject Matter Expert (SME)	Bambang Susanto (IT Manager)
Delivery Manager	Ahmad Fauzi (Delivery Manager)
Project Manager	Pandu Wiradinata (Senior Project Manager)
Data Governance Officer (DGO)	Nabila Azzahra (Data Governance Analyst)
Metadata Officer	Yeni Marlina (Metadata Analyst)
Data Quality Officer (DQO)	Umi Kalsum (Data Quality Analyst)
PIC Data Compliance	Budi Santoso (Data Compliance Manager)

Accountable Stewardship & Ownership

Role	Full Name	Position	Email Address
Lead Business Steward	Lia Kurniasih	-	lia.kurniasih@logistikcepat.example
Data Owner	Hendro Saputro	VP Operations	hendro.saputro@logistikcepat.example

Check: the project page shows **Uploaded Source Files Kept Until 30 Jan 2027** (end date + 30 days, no approved ROPA); Monetized shows **Yes**.

Step 2: Metadata (Metadata Management > select the project > import files)

- 1. Select the project, Data Source Connector **Excel**, upload FLT01, FLT02 and FLT03, then **Discover Source Tables**.
- 2. Select the 3 tables and click **Proceed Metadata (3)**: expect `vehicles` (7 attributes), `deliveries` (12) and `depots` (6) = 25 attributes.
- 3. Open the attributes grid and click **Generate AI Definitions**.
- 4. Set **Table Type** of `depots` to **Reference**; set **Grouping** to Fleet (vehicles), Operations (deliveries) and Network (depots).

Check: only `manager_email` is Highly Confidential (it matches the e-mail keyword); everything else is Confidential. Review point: `driver_code` identifies a driver indirectly; decide with the DGO whether to raise it to Highly Confidential.

Step 3: DSR 1, AI use (Data Sharing (DSR) > New Request)

Source Project	Fleet Delivery Performance
Dataset Name	Delivery Performance History Jun-Sep 2026
Recipient Organisation	PT RuteOptima Teknologi (Dummy)

Purpose & Legal Justification	Share delivery history (FLT02) and the depot list (FLT03) with the route-optimisation vendor to train a model that plans daily routes per depot. Legal basis: legitimate interest (operational efficiency) and the drivers' employment contracts. Controls: driver codes only (no names), postcodes only (no addresses), 2 named vendor engineers, data deleted at project end.
Sharing Start Date	2026-10-01
Sharing End Date	2026-12-31
This dataset will be consumed for AI / Machine Learning workflows	Ticked

Check: an AICK (expected AICK-2026-0011) and the project's DPIA draft are created automatically.

Data & Insights Sharing Evaluation Checklist (on the DSR page, Edit)

Every item needs Yes/No and a remark. For A and C, "No" is the good answer.

#	Question	Answer	Remarks
A.i.1	Loss in revenue due to cannibalization	No	The vendor builds routes only for this company; reselling the model or data is forbidden by contract.
A.i.2	Damage to relationship with customers	No	Customers are identified only by postcode; no customer is contacted.
A.i.3	Other commercial interest(s)	Yes	Optimised routes are part of a paid service for partner couriers; the vendor's licence limits reuse to this project.
A.ii.1	Highly confidential partnerships	No	No partner courier contract data included.
A.ii.2	Patent information	No	No patent information.
A.ii.3	M&A deals	No	Not related to any merger or acquisition.
A.ii.4	Other commercial secret(s)	No	Delivery tariffs and customer volumes per partner are not included.
B.i	Are the data & insights requested sensitive?	No	No health, religion, financial or biometric data; only operational data.
B.ii	Are there any mitigation steps in place if sensitive data & insights are used?	Yes	Drivers appear only as codes (DRV-0001); customer addresses are reduced to postcodes.
B.iii	Are the data & insights requested considered personal data?	Yes	Driver codes can be linked to drivers by HR, so they are personal data under UU PDP.
B.iv	If personal data need to be shared, has written consent for sharing been obtained?	Yes	Drivers' employment contracts cover sharing operational data with service providers; DPA-2026-040 (dummy) signed.
B.v	If personal data need to be used for use case development, has written consent for research been obtained?	Yes	Route optimisation is a stated purpose in the employment contract and the customer terms.
B.vi	Are the data and analytics processes located within the BU's analytics environment with limited access to the working team?	Yes	Vendor works in the company's cloud project with 2 named accounts; access ends 2026-12-31.

C.i.1	Industry-specific laws	No	No logistics regulation restricts sharing anonymised operational data with a processor.
C.i.2	Data protection laws	No	UU PDP: minimal personal data, processor agreement and DPIA in place.
C.i.3	Internal regulations and policies	No	Follows the Group Data Sharing Policy.
D.i	Is the data analysis process carried out using artificial intelligence technology?	Yes	The vendor trains a route-optimisation model; dispatchers approve routes before use.

Sign-off

Approved?	Yes
Prepared By	Hendro Saputro / VP Operations (auto-filled from the project Data Owner)
Acknowledged By	Bambang Susanto / IT Manager (auto-filled from the project SME)
Remarks	Approved with conditions: (1) driver codes and postcodes only, no names or addresses; (2) 2 named vendor engineers; (3) routes are advisory and approved by depot dispatchers; (4) data deleted at project end. Ref: DPA-2026-040 (dummy).

Approval flow: PIC Data Compliance Approval (Budi Santoso) → DM / PM Approval → SME Sign Off → Client Sign Off.

Step 4: AI Compliance Checklist (AI/ML Checklist > AICK-2026-0011 (expected))

Gen AI tools in this project: the platform's local llama3.2 drafts Metadata definitions and DQ rules; the vendor uses GitHub Copilot Business for the routing code. The routing model itself is an optimisation model, not Gen AI.

Created automatically with the AI-use DSR. Open it from **AI/ML Checklist**, click Edit, fill in Status and Remarks for each item, then the sign-off, and Submit.

Gen AI Usage Assessment

Area	Risk	Assessment	Status	Remarks
Before Use	HIGH	The project or product developed using an AI platform has complied with applicable legal regulations and internal company policies	Yes	Use case reviewed against UU PDP and the Group AI Guideline; DPIA completed.
Before Use	HIGH	The Gen AI Platform used is properly licensed and has been approved by management	Yes	llama3.2 runs on-premise (approved by IT); Copilot Business licensed by the vendor.
Before Use	MEDIUM	Gen-AI usage settings have been configured to disable interaction history and ensure opt-out from model training by default	Yes	History and training use disabled for Copilot at organisation level; llama3.2 keeps no history.
Input	HIGH	Do not include personal, sensitive, or intellectual property data.	Yes	Prompts contain only column names and masked samples; no driver codes or e-mails.

Input	HIGH	Interactions with Gen-AI should utilize anonymization, pseudonymization, and dummy data.	Yes	Development uses the dummy files FLT01-FLT03.
Input	LOW	Prompts must not contain bias or harmful narratives, and should be documented if used for reporting or publication purposes.	Yes	Prompt templates stored in the repository and reviewed by the DGO.
Output	MEDIUM	Interactions with Gen-AI must include verification and revalidation of the results to ensure the validity of the information, including inaccuracies, hallucinations, and bias	Yes	AI-drafted definitions and DQ rules are reviewed by the Metadata Officer and DQ Officer.
Output	HIGH	Any source code generated by Gen-AI must be properly validated before being implemented in the Company's systems	Yes	Copilot-assisted routing code passes code review, unit tests and a security scan.
Utilization	MEDIUM	Outputs should only be used after being reviewed and approved by an authorized user.	Yes	Routes are used only after approval by the depot dispatcher.
Utilization	HIGH	Corrections must be made if the AI-generated results are inaccurate or inappropriate before any distribution.	Yes	Wrong routes or definitions are corrected before distribution to partner couriers.

Sign-off (auto-filled from the project)

Approved?	Yes
Prepared By — Delivery Manager	Ahmad Fauzi / Delivery Manager
Acknowledged By — Subject Matter Expert (SME)	Bambang Susanto / IT Manager
Remarks	Approved: Gen AI only for documentation, DQ rules and coding support.

Approval flow: PIC Data Compliance Approval (Budi Santoso) → DM Sign-off → SME Sign-off. It shows **Completed & Signed** only after both signatures or the last approval.

Negative test (optional): set item Output 2 to No with the remark "Copilot code deployed without review" and check the reviewers' reaction.

Step 5: DPIA (open the draft from the DPIA list, click Edit)

The DPIA draft was created automatically with the project's first DSR (one DPIA per project, status Draft). Do not use DPIA > New: open the draft from the DPIA list, click Edit, fill in the fields below and submit.

Process name	Delivery route optimisation
Risk Description	Delivery history with driver codes, GPS-derived times and customer postcodes. Risks: drivers monitored beyond the agreed purpose, re-identification of drivers through codes, and customers located through rare postcodes.

Mitigation Measures	Driver codes instead of names; postcodes instead of addresses; driver-level results not used for performance appraisal; access for 2 named vendor engineers; data deleted at project end.
Residual Risk Level	Low

Data Categories Involved (tick these)

- **Employment & HR:** Employee ID
- **Contact Information:** Postal Code, Email Address
- **Digital & Behavioural:** GPS & Location Data
- **Business & Commercial:** Vendor & Supplier Data, Contract & Agreement Data

Governance Activities

Status: Yes = in place or planned; No = not applicable (the Responsible then shows N/A).

#	Activity	Responsible	Status	Remarks
A1	Data Sharing Request Document	ADI-DI (Internal)	Yes	DSR for the delivery history (AI use) submitted in the platform.
A2	Revoke / Extermination Documentation	ADI-DI (Internal)	Yes	Deletion record planned at access end (2026-12-31).
A3	Data Activity Records Documentation (during project)	ADI-DI (Internal)	Yes	Access logged in the audit log; monthly review by the DGO (Nabila Azzahra).
A4	Role-Based Access Control Document	ADI-DI (Internal)	Yes	RBAC matrix v1.0: 2 vendor engineers, project team per role.
A5	Assess and Approve Documentation Above	Client	Yes	Reviewed and approved by Hendro Saputro (VP Operations).
A6	Grant Access to Project Team Only (per RBAC document)	Client	Yes	Access granted by the company's cloud admin per RBAC v1.0.
B1	Prepare Mitigated Personal Data (e.g. encrypted, hashed, pseudonymised)	Client	Yes	Driver names replaced by codes; addresses reduced to postcodes.
C1	Provide Secure Environment or Schema to Enable Data Sharing	Client	Yes	Dedicated cloud project with no public access and encryption at rest.
D1	Create Metadata Documentation	ADI-DI (Internal)	Yes	Metadata for 3 tables (25 attributes) generated and reviewed.
D2	Measure Data Quality Index	ADI-DI (Internal)	Yes	DQ run on all 3 files; stale delivery dates and swapped depot coordinates flagged.
D3	Assess and Approve Metadata Definition	Client	Yes	Definitions reviewed by Lia Kurniasih (Lead Business Steward).
D4	Assess and Approve Data Quality Measurement Approach and Index	Client	No	Not required: the client accepted the internal DQ approach for operational data.

Approval flow: PIC Data Compliance → DM / PM Approval.

Negative test (optional): tick Special Category "Racial / Ethnic Origin" by mistake and check that reviewers ask why.

Step 6: Data Quality (Data Quality Control > select the project > Run All Data)

1. Data Quality Control: select the project, **Run All Data**; the 3 files are selected.
2. Generate: about 1 minute per column (7 + 12 + 6 = about 25 minutes). You can leave the page and come back through **View progress**.
3. When all 3 finish, open each run, then **Project Report**.

Expected results (facts from the data; exact regexes and rule text come from the AI model)

File	What to look for
FLT01 Vehicles	Blank Attributes 0 / 7. Consistency: <code>plate_number</code> (6 plates without spaces, e.g. B1234XYZ). Small code set <code>vehicle_type</code> (VAN/TRUCK/MOTORCYCLE). Uniqueness for <code>vehicle_id</code> and <code>plate_number</code> . Latency <code>last_service_date</code> 0% (latest 2026-06-06: services overdue).
FLT02 Deliveries	Blank Attributes 1 / 12 (<code>driver_remarks</code>). <code>delivered_time</code> Completeness 85.6% (Warning): empty by design for failed, returned and in-transit deliveries. Consistency: <code>customer_postcode</code> (9 four-digit codes), <code>fuel_liters</code> (5 zero or negative). Uniqueness for <code>delivery_id</code> . Latency <code>pickup_time</code> , <code>planned_eta</code> and <code>delivered_time</code> about 30% when run on 2026-09-29 (latest 2026-09-14, 15 days old).
FLT03 Depots	Blank Attributes 0 / 6. Every column has 12 different values, so every column gets a Uniqueness check. Review point: <code>latitude</code> / <code>longitude</code> are swapped for 2 depots (latitude 110.45 and 110.36 are impossible); the regex may still accept them, so check the values.
Project Report	Blank Attributes 1 / 25 ; all three tables in one report with table filter and export.

Discussion point: DQ passes the swapped coordinates if they look like valid numbers; a range rule (latitude -11 to 6 for Indonesia) would catch them.
