# 1 About this guide

DataGov Tools v2 is a data governance platform: it documents a project's data, measures its quality, and runs the approvals needed to share, assess and delete it. This guide describes every feature as of commit 779429d (release/v2-2026-09-27), one module per section, in the order a project normally goes through them.

Figure 1 - Module map: how records connect.

A project is created first; its data is documented in Metadata and checked in Data Quality. Creating a DSR also creates its AI checklist (AICK) and the project's DPIA draft. An approved ROPA sets how long uploaded files are kept, and BAPD records the final deletion.

The screenshots in this guide show the sample project PRJ-2026-022 (fictitious data). Red numbered markers on a screenshot refer to the numbered list under it.

## 2 Roles and access

Access works on two levels: a **system role** decides what a user may do in each module, and a **project role** decides who approves and signs for a specific project.

### System roles

Default permissions; a Super Admin can adjust a role's permissions in Settings.

| System role                  | What it can do                                                                           |
|------------------------------|------------------------------------------------------------------------------------------|
| Super Admin                  | Everything, including users, roles and AI setup; bypasses approval-step checks in the UI |
| Compliance Officer / DPO     | All modules; approves DSR, DPIA, BAPD and DQ; no user management                         |
| Data Governance Officer      | All modules; approves DSR, DPIA, ROPA, BAPD; runs DQ                                     |
| Project Manager / Data Owner | All governance modules including approvals; reads DQ                                     |
| Data Steward                 | All governance modules including approvals; runs DQ                                      |
| Requester / Regular User     | Creates and edits records; no approvals; reads DQ                                        |
| Auditor                      | Read-only on every module, including the audit log                                       |
| Viewer                       | Read-only on every module; may create DSR drafts                                         |

### Project roles

Set per project in the Data Assets Catalog: SME, Delivery Manager, Project Manager, Data Governance Officer, Metadata Officer, DQ Officer and PIC Data Compliance (all system users), plus the Data Steward and Data Owner (name, email, and for the owner a position). These people receive the project's approval requests and notifications, and fill the DSR and AICK sign-offs.

### 3 Login, dashboard and navigation

Users sign in with email and password at `http://localhost` and land on the Executive Dashboard.

- **Login:** email and password; the session renews itself while you work. A wrong password says so; a server problem shows "HTTP 502 - Server not reachable" instead of a login error.
- **Notifications:** the bell opens a drawer with in-app notifications (approval requested, approved or rejected, DQ run finished, files expiring); the same events can also be sent by email.
- **Detail popups:** a Project ID, DSR ID or AICK ID shown in a list opens the same detail view as its own page.

Figure 2 - Executive Dashboard.

1. **Sidebar menu** - every module, grouped as Discover, Govern, Quality, Control and System. Items you have no permission for are hidden.
2. **New Data Asset** - creates a project; New DSR and Run DQ sit next to it.
3. **Summary cards** - governed assets, sharing requests, privacy assessments, quality checks and disposals due.
4. **Action Items & Approvals** - records waiting for you; Review opens the record.
5. **Audit Telemetry** - the latest activity in the system.
6. **Governance Workflow Distribution** - records per module by status (Draft, Review, Approved, Archived).
7. **Direct Operations** - shortcuts to the main tasks.

## 4 Data Assets Catalog (projects)

Every governance record belongs to a project, and the project page is where its team, owners and retention date are kept.

- **Project list:** all projects with filters for year, category and client.
- **New Project:** name, customer/client, line of business, use case, project year, category (AI / ML, Analytics, Data Governance, Data Quality, Integration, Other), monetized yes/no, start and end date.
- **Project ID:** assigned by the system as PRJ-**<year>-<number>** (e.g. PRJ-2026-022); it cannot be typed or edited. Changing the project year gives the next free ID of that year.
- **Project team:** SME, Delivery Manager, Project Manager, Data Governance Officer, Metadata Officer, DQ Officer and PIC Data Compliance, picked from the user list.
- **Data Steward and Data Owner:** name and email; the Data Owner also has a Position (e.g. "CRM Department Head"), used in the DSR sign-off.
- **Uploaded Source Files Kept Until:** the date the project's uploaded Excel/CSV files are deleted: end date + 30 days, or end date + the retention period of an approved ROPA (see section 10). Metadata, DQ and governance records are never deleted automatically.

The screenshot displays the 'Retail Customer Churn Prediction' project page. The left sidebar contains navigation links for Executive Dashboard, Data Assets Catalog, Metadata Management, and various governance and control functions. The main content area is divided into sections: BASIC INFORMATION, PROJECT TEAM, and a retention section. Red annotations highlight key features: 1. The Project ID 'PRJ-2026-022' is highlighted in a red box. 2. The 'Export PDF' button is highlighted in a red box. 3. The 'Edit' button is highlighted in a red box. 4. The 'BASIC INFORMATION' section is highlighted in a red box. 5. The 'UPLOADED SOURCE FILES KEPT UNTIL' field is highlighted in a red box.

| PROJECT TEAM                                   |                                          |
|------------------------------------------------|------------------------------------------|
| SUBJECT MATTER EXPERT (SME)                    | DELIVERY MANAGER                         |
| Dewi Rahayu<br>dewi.rahayu@company.com         | Ahmad Fauzi<br>ahmad.fauzi@company.com   |
| PROJECT MANAGER                                | DATA GOVERNANCE OFFICER                  |
| Bagas Adi Nugraha<br>bagas.nugraha@company.com | Anisa Putri<br>anisa.putri@company.com   |
| METADATA OFFICER                               | DQ OFFICER                               |
| Diah Ayu Ningrum<br>diah.ayu@company.com       | Dani Wahyudi<br>dani.wahyudi@company.com |
| PIC DATA COMPLIANCE                            |                                          |
| Rudi Santoso                                   |                                          |

Figure 3 - Project page of PRJ-2026-022.

1. **Project ID** - assigned by the system.
2. **Export PDF** - project, team and owners as one PDF.
3. **Edit** - change any field, team member or owner.
4. **Basic Information** - client, category, year, dates and use case.

5. **Uploaded Source Files Kept Until** - the retention date of the uploaded files and the rule behind it.
6. **Project Team** - the people who approve and sign for this project.

## 5 Metadata Management

---

Metadata turns a project's files into a data dictionary: one row per column (attribute), with its meaning, format and sensitivity filled in automatically and reviewed by people.

1. **Import data:** pick the project, then upload Excel/CSV files (several files and sheets at once, up to 25 MB each) or connect a GCP BigQuery table. Data from other databases is exported to Excel/CSV first. Uploaded files are stored for DQ runs until the retention date.
2. **Source tables:** every imported table of the project, with Open Grid per table and Open All Tables.
3. **Attributes grid:** Table Type, Data Year, Grouping, Level, Attribute, Type, Sensitivity, Business Term, Business Definition, Standard Format, PK, Null and Sample.

### Filled in automatically

- **Data type, primary key, nullable and sample values** from the data itself.
- **Sensitivity:** "Highly Confidential" when the column name matches a personal-data keyword (NIK, KTP, nama, email, phone, birth date, salary ...), else "Confidential".
- **Business term:** the column name in words; codes are expanded (cd = Code, id = Identifier) and abbreviations stay in capitals (nik = NIK, amount\_idr = Amount IDR).
- **Standard format:** assessed from the values (e.g. "ID / Code (e.g. CUST00001)", phone number, date); editable from a list.
- **Business definition:** written by the AI model (llama3.2:3b) with Generate AI Definitions, 5 attributes per batch, with a progress bar and a Time left countdown; single rows can be regenerated.

Cells are edited in place and saved; Save All stamps today's date and your name on every row; grouping can be set per table. Export gives Excel or PDF with the project header.

AI Governance Control Plane v1.0

© 2026 Enterprise Governance

Figure 4 - Metadata attributes grid of PRJ-2026-022.

- 1. Export** - the dictionary as Excel or PDF.
- 2. Generate AI Definitions** - writes the missing definitions with the AI model (greyed out here because all 32 are done).
- 3. Save All** - stamps today's date and your name on every row.
- 4. Project info strip** - project, business users, line of business, Data Steward and Data Owner (name and email).
- 5. Filters** - by table and sensitivity, plus a search box.
- 6. Sensitivity** - "Highly Confidential" for personal data.
- 7. Business term** - the column name in words; abbreviations such as NIK stay in capitals.
- 8. more** - expands a long definition, format or sample.
- 9. ai badge** - the definition was written by the AI model.

## 6 Data Quality

Data Quality scores every column of a table on four dimensions, using rules the AI model (llama3.2:3b) writes from the data itself; runs work on the files already imported in Metadata.

| Dimension    | What it checks                                                                                  | Applies to              |
|--------------|-------------------------------------------------------------------------------------------------|-------------------------|
| Completeness | Share of rows that are not empty                                                                | Every column            |
| Consistency  | Share of values that match the column's pattern (regex) and business rules                      | Every column            |
| Uniqueness   | Share of distinct values                                                                        | ID-like and key columns |
| Latency      | How recent the latest date is: 100 today, 70 within 7 days, 50 within 14, 30 within 30, 0 older | Date columns            |

Each check is **pass** at 95% or more, **warning** from 70% to under 95%, **fail** under 70%. A column with no values at all (empty, spaces, NULL, N/A, "-") is marked **no data** instead.

Figure 5 - DQ run statuses.

A failed run shows why (e.g. source file not found, no data rows, AI model not reachable) and what to do; temporary problems are retried automatically.

### Running DQ

1. **New DQ Run / Run All Data:** a 6-step wizard - Project, Data (files from Metadata; missing or already-running files cannot be picked), Preview (first 10 rows), Generate, Results, Archive.
2. **Generate:** files are checked one after another, about 1 minute per column; each file shows "x / y columns checked" and a countdown, plus a total Time left.
3. **Progress page:** you may leave the page. Data Quality - project - View progress reopens the running files with their countdown; a banner on the DQ page shows the time left.
4. **No double start:** while a file is queued or running, it cannot be started or re-run again.

**Data Quality Control**  
Evaluate Completeness, Consistency, Uniqueness, and Freshness dimensions per data asset  
4 tables · 4 runs executed · Avg Score: **93.1%**

AI Governance Control Plane v1.0 © 2026 Enterprise Governance

Figure 6 - Data Quality overview of PRJ-2026-022.

- 1. Project selector** - choose the project to evaluate.
- 2. Run All Data** - starts the New DQ Run wizard for all files (becomes View Progress while runs are active).
- 3. Filter** - all tables, evaluated, or not yet checked.
- 4. Project Report** - all tables of the project in one report: combined cards, per-table scores, all rules and findings, export.
- 5. Run All** - the same as 2, next to the table.
- 6. Latest score** - with its version (v1, v2 ...). During a re-run the previous score stays visible with a "v2 running" badge.
- 7. Status** - TEST04 failed on purpose: it has no data rows.
- 8. Report** - opens that table's run.

Figure 7 - DQ run page of TEST01.

- 1. Re-run Check** - runs the file again as the next version; the version history is kept.
- 2. Total Metric Checks** - first row of cards, with passed, warning and failed checks next to it.
- 3. Blank Attributes** - columns with no values at all.
- 4. Overall Score** - second row, followed by the score per dimension.
- 5. Latency Score** - N/A when the table has no date columns.
- 6. Rules** - every rule with data type, business rules, regex, version, complexity, reasoning, remarks and result; exportable to Excel or PDF.
- 7. Findings** - what failed and where.
- 8. Score bars** - per column and dimension; N/A where a dimension does not apply.

**Review:** reviewers approve, reject or request revision; an approved run can be archived to GCP.

## 7 Data Sharing Request (DSR)

A DSR asks permission to share a project's data with someone outside the team; it is approved in four steps and signed before sharing may start.

- **New DSR:** project, dataset name, recipient, purpose, whether the data is used for AI, and the sharing period (the end date follows the project end date). The system gives a tracking ID such as DSR-2026-0007.
- **Created with it:** an AI Compliance Checklist (AICK) for the DSR, and a DPIA draft for the project if the project has none yet.
- **Evaluation checklist:** the Data & Insights Sharing Evaluation Checklist - each item answered Yes/No with a remark.
- **Sign-off:** Prepared By is filled from the project's Data Owner (name and position on the project); Acknowledged By from the project's SME (name and company job title). Both have a signature and a remarks field.

| Step | Approval                                    |
|------|---------------------------------------------|
| 1    | PIC Data Compliance approval                |
| 2    | Delivery Manager / Project Manager approval |
| 3    | SME sign-off                                |
| 4    | Client sign-off                             |

**Status:** Draft - Submitted (waiting for PIC Data Compliance) - Under Review (after step 1) - Approved - signed; any step can reject it. Seven days before the sharing period ends the team gets a warning, and an approved DSR past its end date is archived automatically.

The screenshot displays the AI Governance Control Plane interface. On the left is a sidebar with navigation options: Executive Dashboard, DISCOVER (Data Assets Catalog, Metadata Management), GOVERN (Data Sharing (DSR), AI/ML Checklist (AICK), Privacy Impact (DPIA), ROPA Records), QUALITY (Data Quality Control), CONTROL (Extermination (BAPD), Audit Telemetry), and SYSTEM (AI Setup & Ollama, Settings & Access). The main content area shows a specific DSR-2026-0007 titled 'Retail Customer Churn Prediction'. At the top, it indicates the status is 'Submitted' and 'AI Use'. A yellow banner states 'Action Required: PIC Data Compliance Approval Pending Approval' with an assigned approver 'Budi Santoso'. Below this, the 'REQUEST DETAILS' section provides information about the project (PRJ-2026-022), customer (PT Nusantara Retail Digital), and sharing dates (05 Oct 2026 to 31 Mar 2027). The 'APPROVAL TIMELINE' section shows a list of approval steps: PIC Data Compliance Approval (Budi Santoso, Awaiting Action), DM Approval (Ahmad Fauzi, Not Yet), and SME Sign Off (Dewi Rahayu, Not Yet). The interface also includes buttons for 'Export PDF' and 'Edit'.

Figure 8 - DSR-2026-0007.

- 1. Status** - here Submitted: waiting for PIC Data Compliance. The AI Use badge means an AICK applies.
- 2. Export PDF** - request, checklist and sign-off as one PDF.
- 3. Edit** - fill the evaluation checklist and the sign-off.
- 4. Approve Step / Reject** - shown to the approver of the current step.
- 5. Request Details** - project, client, AI use, sharing period and purpose.
- 6. Approval Timeline** - the four steps with approver, comments and status.

## 8 AI Compliance Checklist (AICK)

The AICK records how AI is used with the shared data; one is created automatically with every DSR (e.g. AICK-2026-0007 for DSR-2026-0007).

- **Gen AI Usage Assessment:** 10 questions in four groups - Before Use, Input, Output and Utilization - each answered Yes/No with a remark.
- **Sign-off:** Prepared By = the project's Delivery Manager, Acknowledged By = the project's SME, both filled from their user accounts, plus "Approved? Yes/No" and signatures.
- **Approval steps:** 1. PIC Data Compliance approval, 2. DM sign-off, 3. SME sign-off.
- **Status:** In Progress - Submitted - Under Review - Approved (Ready for Sign-Off) - Completed & Signed; or Rejected. It counts as signed only when both signatures are present or the last step is approved.

The screenshot displays the AI Governance Control Plane interface. The left sidebar contains navigation menus for Executive Dashboard, DISCOVER (Data Assets Catalog, Metadata Management), GOVERN (Data Sharing (DSR), AI/ML Checklist (AICK), Privacy Impact (DPIA), ROPA Records), QUALITY (Data Quality Control), CONTROL (Extermination (BAPD), Audit Telemetry), and SYSTEM (AI Setup & Ollama, Settings & Access). The main content area shows the AICK-2026-0007 checklist for 'Retail Customer Churn Prediction'. The status is 'Submitted' and 'AI Use'. An action required is 'PIC Data Compliance Approval Pending Approval' assigned to Budi Santoso. The assessment information includes Project ID PRJ-2026-022, DSR ID DSR-2026-0007, Project Name Retail Customer Churn Prediction, Customer / Client PT Nusantara Retail Digital, Sharing Start Date 05 Oct 2026, and Sharing End Date 31 Mar 2027. The approval timeline shows 'PIC Data Compliance Approval' by Budi Santoso, 'DM Sign-off' by Ahmad Fauzi, and 'SME Sign-off' by Dewi Rahayu. The Gen AI Protection Checklist is also visible at the bottom.

Figure 9 - AICK-2026-0007.

1. **Status** - the checklist's own status.
2. **AI Use** - the linked DSR uses AI.
3. **Export PDF** - checklist and sign-off as one PDF.
4. **Approve Step** - shown to the approver of the current step.
5. **Approval Timeline** - PIC Data Compliance, DM sign-off, SME sign-off.
6. **Gen AI Protection Checklist** - the questions with risk level, mitigation, status and remarks.

## 9 Data Protection Impact Assessment (DPIA)

The DPIA assesses the privacy risk of a project's data use; each project has one, created as a draft together with its first DSR.

- **Open, don't create:** open the draft (e.g. DPIA-2026-0007) from the DPIA list and click Edit. The list shows DSR Status and DPIA Status as separate columns.
- **Risk assessment:** project asset, process name, data categories involved, risk description, mitigation measures and residual risk level (Low / Medium / High).
- **Governance activities:** template items A-D (A1-A6 access and documentation, B1 mitigated personal data, C1 secure environment, D1-D4 metadata and data quality), each with the responsible party, a Yes/No status (No shows N/A) and a remark.
- **Approval steps:** 1. PIC Data Compliance, 2. DM / PM approval.

The screenshot displays the 'AI Governance Control Plane' interface for a Data Protection Impact Assessment (DPIA). The main content area shows the details for 'DPIA-2026-0007', which is in a 'Submitted' state. The project is titled 'Retail Customer Churn Prediction'. A yellow banner indicates an 'Action Required: PIC Data Compliance Approval Pending Approval' by Budi Santoso. The form is divided into several sections: 'PROJECT INFORMATION' (containing Project ID, DSR ID, Project Name, and Sharing dates), 'DATA CATEGORIES INVOLVED' (listing Personal Identity, Contact Information, Financial, Digital & Behavioural, and Business & Commercial categories), and 'APPROVAL TIMELINE' (showing the 'PIC Data Compliance Approval' step by Budi Santoso). The interface includes a sidebar with navigation options like 'Executive Dashboard', 'Data Assets Catalog', and 'Privacy Impact (DPIA)'. The top right shows the user 'Super Administrator' and a 'Create' button. The bottom of the page indicates 'AI Governance Control Plane v1.0' and '© 2026 Enterprise Governance'.

Figure 10 - DPIA-2026-0007.

1. **Status and version** - here Submitted, v1.
2. **Export PDF** - the full assessment.
3. **Approve Step** - shown to the approver of the current step.
4. **Project Information** - with the linked DSR and AICK IDs and the sharing period.
5. **PII flag** - how many personal-data categories are involved.
6. **Data Categories Involved** - grouped as personal identity, contact, financial, digital and commercial.
7. **Approval Timeline** - PIC Data Compliance, then DM / PM.

## 10 Record of Processing Activities (ROPA)

The ROPA records why and how personal data is processed in a project, and its approved retention period decides how long the project's uploaded files are kept.

- **Fields:** project, process name, purpose, data categories, data subjects, legal basis, retention period, recipients, and linked data assets.
- **Status:** Draft - Submitted - Under Review - Approved or Rejected. Submitting notifies the project's DGO and PIC Data Compliance. An approved ROPA cannot be edited and gets a new version number.
- **Retention period:** write it with a duration, e.g. "5 Years from Account Termination", "18 Months" or "5 tahun". Once approved, the project's files are kept until the project end date + that period instead of + 30 days; with several approved ROPAs the longest counts. A text without a duration ("As required by law") is ignored and the project page shows a warning.

**Records of Processing Activities (ROPA)**  
Maintain register of data processing activities, categories, and lawful bases under UU PDP & GDPR Art. 30 : 5 records

Figure 11 - ROPA Records list.

1. **New Record** - create a ROPA for a project.
2. **Search** - by process, project or category.
3. **Status filter** - draft, submitted, under review, approved, rejected.
4. **Legal basis filter** - e.g. consent, contract.
5. **Status** - an approved ROPA sets the file retention of its project.
6. **View** - open the record.

# 11 Data extermination (BAPD) and retention policies

BAPD is the formal record that a dataset has been deleted after its retention ended; it needs two approvals before the deletion is executed.

- **Retention policies:** a list per dataset type with its retention in days and a policy reference; a default set can be loaded by an admin.
- **Eligible datasets:** datasets whose retention has expired, found by a daily scan (02:00 WIB).
- **New BAPD:** project, dataset name and location, retention policy, expiry date, reason and the responsible person.
- **Approval (dual):** 1. Data Owner sign-off, 2. Compliance Officer review.
- **Status:** Draft - Submitted - Under Review - Approved - Executed - Archived; or Rejected.
- **Execute and proof:** after approval the deletion is marked executed (who and when) and a proof-of-deletion document can be downloaded.

Separately, the system deletes a project's uploaded source files by itself on the retention date shown in the Data Assets Catalog (see section 10), with a warning 7 days before.

**Extermination Records (BAPD)**  
Bulk archive & purge of data with dual mandatory sign-offs and Proof of Deletion (POD) - 6 records

**1** + New BAPD Request

**2** Datasets Overdue for Extermination

| Dataset                          | Location                                  | Expired     | Overdue | Action                 |

Figure 12 - Extermination Records (BAPD).

- 1. New BAPD Request** - start a deletion record.
- 2. Datasets overdue** - found by the daily retention scan.
- 3. Create BAPD** - start a request directly from an overdue dataset.
- 4. Status** - Draft, Under Review, Approved, Executed.

5. **Download** - the proof of deletion after execution.
6. **View** - open the record and its two approvals.

## 12 Administration and system behaviour

Super Admins manage users, roles and the AI model; everything important is written to an audit log that nobody can change.

- **Settings & Access:** users with name, email and company position (searchable), their roles and active status; role permissions can be adjusted per role.
- **AI Setup & Ollama:** provider (local Ollama or an Ollama-compatible cloud endpoint), base URL, model (default `llama3.2:3b`), timeout per call, batch size, and an API key stored encrypted.
- **Audit Telemetry:** every create, update, approval and sign-off with user, time and details; audit rows cannot be edited or deleted.
- **Error messages:** a failed action shows the HTTP code, the cause and what to do, e.g. "HTTP 413 - File too large: the maximum is 25 MB per file".

The screenshot displays the 'AI Setup & Ollama' configuration interface. On the left is a sidebar with navigation links: Executive Dashboard, Data Assets Catalog, Metadata Management, Data Sharing (DSR), AI/ML Checklist (AICK), Privacy Impact (DPIA), ROPA Records, Data Quality Control, Extermination (BAPD), Audit Telemetry, and AI Setup & Ollama (selected). The main area is titled 'AI Setup & Ollama' and includes a 'Needs setup' notification. The configuration form contains:
 

- OLLAMA PROVIDER CONFIGURATION:** A section with a toggle for 'Enable AI generation' (labeled 2) and a note about secure encryption.
- Provider:** A dropdown menu set to 'Ollama'.
- Mode:** A dropdown menu set to 'local' (labeled 3).
- Base URL:** A text field containing 'http://ollama:11434'.
- Model:** A dropdown menu set to 'llama3.2:3b' (labeled 5).
- Timeout:** A text field set to '120' (labeled 4), with a unit of 'Seconds'.
- Batch size:** A text field set to '5' (labeled 5), with a unit of 'Definitions per bulk request'.
- API Key:** A text field for pasting the Ollama Cloud API key (labeled 6), with a 'Not saved' indicator.
- Action Buttons:** 'Test Connection' (labeled 7) and 'Save AI Setup' (labeled 8) buttons at the bottom.

Figure 13 - AI Setup page.

1. **Setup status** - shows whether the AI configuration is complete.
2. **Enable AI generation** - turns AI definitions and DQ rules on or off.
3. **Model** - the model name, llama3.2:3b by default.
4. **Timeout** - seconds allowed per AI call.
5. **Batch size** - definitions generated per request.
6. **API Key** - only for a cloud endpoint; stored encrypted.
7. **Test Connection** - checks that the AI service answers.
8. **Save AI Setup** - stores the settings.

## Scheduled jobs

| Job                        | When (WIB)       | What it does                                                             |
|----------------------------|------------------|--------------------------------------------------------------------------|
| Retention eligibility scan | Daily 02:00      | Flags BAPD records past their expiry date                                |
| Temp file cleanup          | Daily 03:00      | Deletes export files older than 24 hours                                 |
| Source file expiry         | Daily 07:00      | Warns 7 days before, then deletes uploaded files at their retention date |
| DSR expiry                 | Daily 08:00      | Warns 7 days before a sharing period ends; archives expired DSRs         |
| GCP key purge              | Every 30 minutes | Removes temporary BigQuery credentials                                   |

## 13 Sample test project and glossary

**PRJ-2026-022 "Retail Customer Churn Prediction"** is the sample project for trying every feature; all its data is fictitious.

It has four files - TEST01 Customer Master (200 rows), TEST02 Transactions (600), TEST03 Churn Features (200) and TEST04 Header Only (no rows, to show "No data found") - with 32 metadata attributes, DSR-2026-0007 with its AICK and DPIA, and DQ scores of 94.2%, 91.7% and 93.5%. The files and a step-by-step test guide are in the repository folder `Dummy Data Source/PRJ-2026-022/`.

### Glossary

| Term                | Meaning                                                                   |
|---------------------|---------------------------------------------------------------------------|
| AICK                | AI Compliance Checklist, one per DSR                                      |
| BAPD                | Formal record of data extermination (deletion)                            |
| DGO                 | Data Governance Officer                                                   |
| DPIA                | Data Protection Impact Assessment, one per project                        |
| DQ                  | Data Quality                                                              |
| DSR                 | Data Sharing Request                                                      |
| PIC Data Compliance | Person in charge of data compliance; first approver of DSR, AICK and DPIA |
| ROPA                | Record of Processing Activities                                           |
| SME                 | Subject Matter Expert                                                     |
